PROFILE

Frontend-focused Software Engineer and Computer Science student at the University of East London. Experienced in building full-stack applications using React and FastAPI, with a focus on responsive UI, API integration, and clean, maintainable code. Currently completing a one-month Software Development Internship at Affinity (Shipping) LLP, inspecting codebases, identifying security vulnerabilities, and contributing to an AI-powered back-office feature. Actively seeking a frontend or full-stack junior role in London.

PROFESSIONAL EXPERIENCE

Software Development Intern | Affinity (Shipping) LLP, London | May 2026 - June 2026 (1-month internship)

- Inspected existing codebases to understand application structure, business logic, and potential technical issues.
- Identified security vulnerabilities and reported findings clearly to the development team, contributing to remediation and safer application behaviour.
- Produced structured technical audit notes with practical recommendations for improving security, reliability, and maintainability.
- Contributing to the development of an AI-powered feature for the back-office system to support internal workflow efficiency.
- Collaborated with developers to review issues, discuss solutions, and understand implementation constraints in a real business environment.

PROJECT EXPERIENCE

AI-Powered CV Matching System | Full-Stack Project - London | 2026

- Built a full-stack application using React (Vite) and FastAPI (Python).
- Integrated REST APIs to process and analyse PDF CV data in real time.
- Implemented semantic matching using OpenAI embeddings.
- Developed a responsive UI with real-time scoring and feedback.

Receipt Flow | Full-Stack Web Application - London | 2026

- Built a full-stack app using React (Vite) and FastAPI (Python).
- Developed responsive UI with reusable components and clean user flows.
- Integrated REST APIs for real-time data processing and updates.
- Improved UX with error handling, loading states, and performance focus.

Personal Portfolio Website | Front-End Project - London | 2026

- Built a responsive React portfolio to showcase projects and skills.
- Focused on UI/UX, performance, and reusable components.

EDUCATION

University of East London - BSc (Hons) Computing Science | London | Jan 2024 - Present

- Relevant Modules: Software Development (98), Data Structures & Algorithms (89), Artificial Intelligence (82), Web & Mobile Development (87), Database Systems (84).

SKILLS

- **Frontend:** JavaScript (ES6+), React, TypeScript (learning), HTML, CSS, Tailwind (basic), Vite
- **Backend:** FastAPI (Python), REST APIs
- **Tools:** Git, GitHub
- **AI:** OpenAI API, NLP fundamentals
- **Testing:** Jest (basic)
